Bulletin No. 107

Cab Switches for Ancillary Equipment

When Bodybuilders and equipment installers supply and fit electrical ancillary equipment to MAN chassis we recommend the use of MAN Original Parts to ensure that the extra switches look integral with the vehicle's original dash.

The available switches come in three logics which are On/Off/On (Momentary on), On/Off (Momentary on), or, On/Off (Latched on).

Typical applications for these logics include:

- On/Off/On (Momentary on) – sheeting system for hookloader or tipper;
- On/Off (Momentary on) – reverse beeper night silent;
- On/Off (Latched on) – work lights, beacons, air horn changeover, etc.

It is to be noted that the range of symbols is limited, so in some instances the installer may have to make their own sticker to symbolise the desired function of the switch.

For each switch a single connector housing is required, along with a spring contact for each pin to be used.

Please see the table on the following page for part numbers and additional information.

Should you have any queries on the above, please contact Product Engineering on 01793 448170 or email bodybuilder@man.co.uk.

Please circulate and then retain in the Bodybuilder's Manual

MAN SWITCHES & ACCESSORIES
