

**Bulletin No. 060**

**24 July 2001**

**CHANGES AFFECTING MAN TG-A PUSHER AXLE TRACTOR UNITS.**

It should be noted that there is now a factory pusher axle TG-A tractor unit available which will replace the MAN / Hendrickson UK version.

**The changes to note.**

- 1) Increase in the outer axle wheelbase spread of 50mm.
- 2) An increase in chassis frame height of 20mm on the Factory model (FPLRT).
- 3) The model designation has also changed.

The details for both models are as follows.

**MAN / Hendrickson UK version, Model designation FPLT.**

Outer axle wheelbase spread 3900mm.

Frame height with standard 315/70R22.5 tyres 968mm measured at the centre line of the drive axle.

**MAN Factory Produced version, Model designation FPLRT.**

Outer axle wheelbase spread 3950mm.

Frame height with standard 315/70R22.5 tyres 988mm measured at the centre line of the drive axle.

In the short term both models are available in the marketplace, we would therefore recommend that when requested to provide any calculations or information relating to a MAN TG-A Pusher axle tractor unit, that you request the customer or MAN salesman concerned to confirm the model designation of the chassis in question to avoid any confusion or error in the information provided.

Should you have any queries on the above, please contact Engineering on 01793 448170.

**Please circulate and then retain in the Body Builders Manual.**
