

Bulletin No.

068

Date:

17 July 2002

Subject:

Increase in chassis frame height.

It should be noted that the frame height has increased by 75-85mm at the centre of the rear bogie on all F2000 8x4 chassis. This is due to the new installation method which uses rubber fixing blocks between the axle and springs. The revised frame height is now :

Front – 1025mm

Rear – 1255mm measured at the centre of the rear bogie.

Should you have any queries on the above, please contact Engineering on 01793 448170.
